

UPS Healthcare

Quality Focused. Patient Driven.

Scalability and Flexibility to Improve the Bottom Line

To stay competitive, healthcare firms must continually adjust to changing conditions like logistical ramp-ups for new product offerings and natural disasters that could significantly disrupt a supply chain.

UPS can maximize your supply chain flexibility by reducing staff carrying costs, deferring capital investment, adjusting to seasonal demands, and overcoming unexpected disruptions.

As one of the world's largest integrated healthcare logistics network, UPS operates a scalable, global network with:

8 million sq ft of healthcare distribution space

A global team of more than 5,000 logistics healthcare professionals

Customs brokerage experts providing clearance services for 220+ countries and territories

Technology innovation to manage logistics

When you're selecting a logistics partner, UPS recommends you carefully consider the following capabilities:

Planning for the Unknown

Planning for unexpected events can often have unexpected costs. Because many business leaders are optimists by nature, one option is to not protect against risks due to expense or low probability.

But why take the risk when you can possibly reduce the expense of contingency planning by working with a third-party logistics provider?

With our far-reaching network of distribution centers, many with temperature and humidity controlled environments, you get the capabilities you need in case of the unexpected.

Whether you someday face a volcano in Iceland knocking out air service, a tsunami in Asia or a fire at a key distribution center in North America, contingency planning is too important to leave to chance.

Flexibility to Scale

As a leader in global logistics, UPS offers you the benefits of a healthcare logistics network without the expense of ownership. That means you can more easily expand your distribution operations while minimizing capital outlay.

You gain access to healthcare-licensed facilities that meet GxP standards, yet commit only to the space you need at the time. Plus your products will be handled by a global team of more than 5,000 healthcare logistics professionals.

It's critical that you are able to get products exactly where they need to be, when they need to be there. And having the flexibility to expand into domestic or international markets is necessary in today's healthcare environment.

When it comes to scale, you get unmatched scalability with UPS.

We can help accelerate growth while minimizing risk

The key to mitigating risk while growing is developing a logistics plan that's flexible, agile and affordable.

Helix: A user-friendly, award-winning global uniform platform utilized by many hospitals and pharmaceutical manufacturers that provides visibility and control over products.

A logistics provider that can help you make quick supply chain adjustments may be your best ally in helping you meet your financial goals.

The key to successfully adapting to change is working with a logistics partner that you can trust.
