# Determine the Weight and Size

## UPS Express® Freight

### How to Determine Billable Weight

Compare the freight shipment's minimum billable weight, actual weight and dimensional weight. The greater of the three is the billable weight and should be used to calculate the rate.

### Step 1

Minimum billable weight of a freight shipment is 71 kg.

### Step 2

Determine actual weight and round up any fraction of a kilogram to the next half (0.5) kilogram.

### Step 3

Determine dimensional weight by multiplying the item's length by the width by the height. For each dimension, measure the largest distance, rounding each measurement to the nearest whole number. The result is the cubic size. Divide the cubic size by 6,000\* when measured in centimetres. Round up any fraction of a kilogram to the next half (0.5) kilogram.

\* Calculations for dimensional weights are based on current International Air Transport Association (IATA) standards. These standards are subject to change without prior notice.

\*\* Pallet billable weight is equal to the shipment weight (143 kg) plus the weight of a pallet (approximately 19 kg). Each pallet and its secured contents is entered as one piece.
