How to Set Up and Start Your UPS® Pickup Point Service

1. Display Your Placard

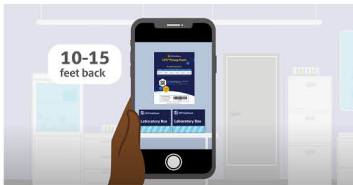

Choose a site where both your staff and the UPS driver can clearly see and easily access the placard, and where your outgoing package volume can be accommodated.

Set your Pickup Point in a place that will allow for late pickups and won't be blocked by locked doors. Avoid areas where theft may occur.

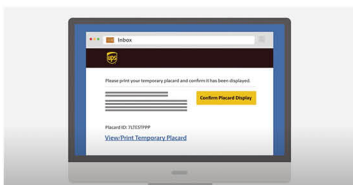

If you are using a **specimen box**, attach the placard to the lid. Use a **combination lock** if you need to secure it (keyed locks are not allowed).

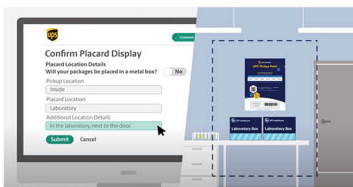

2. Verify and Activate Your Pickup Point

Take a photo of the site with the placard properly displayed from about **10 to 15 feet away**, so that we have a visual reference of the location.

Look for the **Confirm Placard Display** link in your email, or visit ups.com/upplm/dashboard to upload your photo and confirm your details.

Provide the location of the Pickup Point in your building and driver instructions. If you're using a lockbox, don't forget to include the combination.

Look for our email confirming your start date or check with your central lab.

If you need a pickup before your first scheduled date, please call **1-844-4UPS-LAB (1-844-487-7522)** for expedited service.

Report any changes to your service to upslablogistics@ups.com. Please include your 9-digit Pickup Point ID in the subject line. We will confirm your changes and send you an updated temporary placard if necessary.
